

**IN THE SPECIFICATION:**

Please amend the Abstract, beginning at line 6 of page 26 as follows:

A system and method are provided for coordinating a power-save interval in an IEEE 802.11 wireless network. The method ~~comprises:~~ transmits ~~transmitting~~ a first frame from an access point (AP) to a quality of service station (QSTA)[[:]] and receives ~~receiving~~ an acknowledgement from the QSTA[[:]]. ~~[[i]]In response to receiving the acknowledgement,~~ retransmitting the first frame is retransmitted from the AP to the QSTA[[:]] ~~in response to receiving the acknowledgement, identifying and~~ the retransmitted first frame is identified as the last frame in the transmission queue[[:]]. ~~receiving [[a]]An acknowledgement is received~~ responsive to the retransmitted first frame[[:]] and[[:]] ~~timing~~ the next minimum service interval is timed in response to the retransmitted first frame.
